

EFS Ink Replacement / Top-up Instructions

The EFS should be refilled when the franked impression begins to fade. Please follow the instructions below to replace your ribbon cassette.

12.2 Inking

Depending on the equipment of your EFS 3000 franking system, it will be supplied with ink from a cartridge or a heavy-duty inking system. Use only inks provided by your FP dealer.

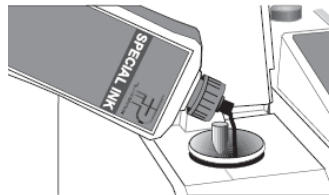

EFS 3000 with cartridge inking system

To add ink to these machines:

- Open the inking system flap.
- If necessary, pull off the old ink cartridge.
- Insert the new ink cartridge onto the black funnel tube. The ink will flow into the inking reservoir.
- Pull off the empty ink cartridge.
- Close the inking system flap.

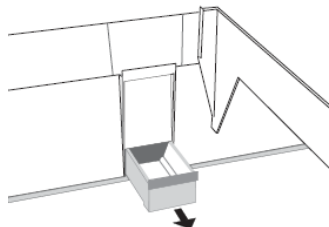

EFS 3000 with heavy-duty inking system

To add ink to this meter:

- Open the inking system flap.
- Fill ink into funnel of heavy-duty inking system. Never use more than one bottle at one time.
- Close the inking system flap.

Safeguard against overfilling

The inking system is fitted with an overflow chamber to safeguard against overfilling. Extra ink flows into a special overflow collector.

Check the collector at regular intervals, and drain it as necessary.
